Assessing The Situation

On April 20, 2026, the station of Kensing was destroyed, the things damaged in the station were the following:

- Surface level building
- Stairs leading into the underground platforms
- Parts of an old unused Toniron-Oskoro railway line

The underground platforms itself have not been destroyed and work functionally. The plans to stop Capital Line trains earlier at Northlocke will go in effect for April 21, 2026.

The cost of damage done to the station was around \$5.6 Million Duro's, and the cost of damage done to the surrounding area was \$50.5 Million Duro's

TTC aims to improve the station and the surrounding areas with new developments that will improve the area.

Planning the Redevelopment

The redevelopment process of the station will aim to improve it to fit the needs of Toniron residents.

Underground Platform Improvements

While the underground platforms were intact in this, it can be a good time to improve the underground platforms. The current platforms can only fit the Capital Line and the ZK2Line, however other lines might be meeting at Kensing such as AmsterLux. The improvements aim to expand Kensing to make the underground platform a larger one, this will also make it so that the planned Toniron-Noord station is not needed. A 2nd underground level will also be made for new lines and future-proofing the station if other lines need to connect to Kensing.

More Floors

TTC aims to improve the development by adding more floors to the surface level building, and expanding the building. TTC is considering making Kensing like Toniron Central with a multi-floor design, however this building could be called the Kensing Tower and feature floors for commercial retail space (which is needed in Toniron due to the lack of major shopping centres), and more office space can be used on the upper floors, the station will expand in size and the Toniron-Noord station will not be needed after the expansion is done.

Cost of the Redevelopment

The cost of the redevelopment will be measured in the following table breakdown.

Name of Item	Estimated Cost	Funding
Underground Station Expansion	\$2.2 Million Duro's	TTC (Toniron Transit Company)
Surface Level Building Reconstruction	\$5.4 Million Duro's	TTC (Toniron Transit Company)
Refilling of the crater	\$13.4 Million Duro's	Toniron City Government
Kensing Shopping Centre	\$1.4 Million Duro's	Chime ZK Yellowmart Walmart Zuik Red Food
Kensing Complex (Office Space)	\$4.3 Million Duro's	EC (Emerald Corporation) Ellovater ZK Zebione ZK Zandan ZK
Kensing Car Park	\$1.3 Million Duro's	Zandan ZK Bluekurio ZK
Total	\$28 Million Duro's	

Land Acquisition Requirements

The land acquisition will have to be done to expand the station. The station and the car park will require the following land which is circled in red.

The land acquisition will cost around \$1.3 Million Duro's, which will make the total cost \$29.3 Million Duro's, things that would have to be demolished are some roads, the Ellovater Office, the brick building, and parts of a village area. The intersection will also no longer be an intersection.
